

# TOXICOLOGY RESOURCES FOR INDUSTRIAL HYGIENISTS IN EMERGENCY RESPONSE

ANDREW MAIER, PHD, DABT, CIH  
TOXICOLOGY EXCELLENCE FOR RISK ASSESSMENT (TERA)

# Objectives of Talk

- Roles of the IH in chemical emergency response
- Resource identification and selection - hazard and toxicity information
- Resource identification and selection - exposure limits alternatives

# Role of the Industrial Hygienist

- Common Role:
  - ▣ Advisor to Onsite Incident Commander
    - Health effects of Concern and Relevant Exposure Limits
      - Exposure assessment strategy
      - Entry and control procedures
- Toxicology information supports decision making!
- Needs and resources differ based on response phase:
  - ▣ Planning
  - ▣ Initial Incident Response
  - ▣ Ongoing Response
  - ▣ Recovery and Clean-up

# The Risk Value Process

This process incorporates the fundamental concepts of toxicology – that for non-cancer effects, there is an exposure threshold below which exposure is safe and the onset of toxicity is a function of the exposure concentration.

# Hazard and Toxicity Information

## □ Hazard and Toxicology Information Sources

### □ Rapid response phase:

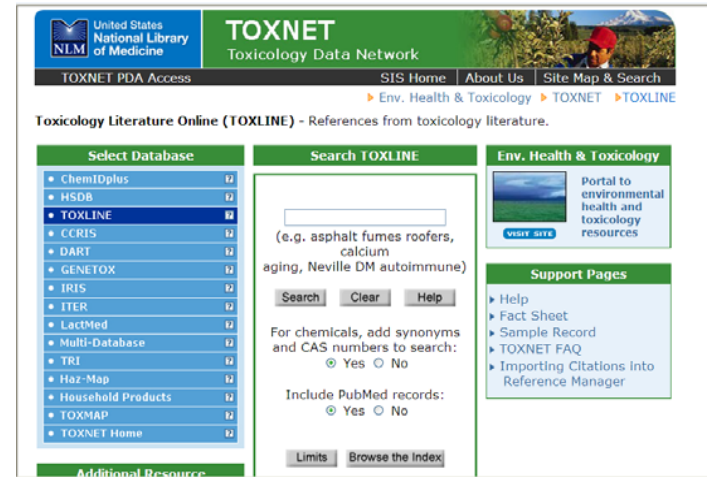

- CHEMTREC®; MSDS; etc.

### □ Planning or ongoing management phase:

- TOXNET; Agency Toxicity reviews; EPA and EU chemical registration databases; etc.

### □ Other integrated resources

- CHEMM; HSDB, etc.

# Using Toxicology Information

- Things to know:
  - ▣ Rapid sources of key target organs and effects
  - ▣ The difference between potential hazard and degree of potency; and the indicators of potency embedded in current information resources
  - ▣ Current hazard and labeling classifications
    - DOT placards and NFPA codes
    - European Union Risk-phrases
    - Globally Harmonized Systems (GHS)
    - H-phrases and symbols
  - ▣ The many sources of detailed toxicology summaries and their relevance and reliability (peer reviewed?)

# Types of Exposure Guidance

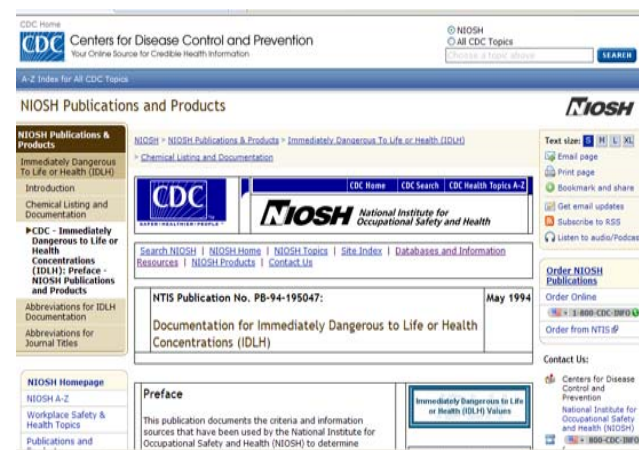

- There are many sources and types of exposure limit information that can apply at different phases of an emergency response scenario:
  - ▣ Exposure duration
    - Acute versus chronic?
  - ▣ Exposure population
    - Responders, workers, general population?
  - ▣ Exposure frequency
    - Routine or infrequent?
- How do you find these and select one for your scenario?

# Types of Acute Limits

## Occupational Exposures

- Routine operations
  - ▣ ACGIH Threshold Limit Value (TLV<sup>®</sup>)
    - TWA, STEL or Ceiling Limits
  - ▣ AIHA Workplace Environmental Exposure Level (WEEL<sup>™</sup>)
    - TWA, STEL or Ceiling Limits
- Special occupational populations or scenarios
  - ▣ NIOSH Immediately Dangerous to Life or Health Values (IDLH)
  - ▣ U.S. EPA – pesticide limits for agricultural workers and new chemical registration
  - ▣ U.S. DoD – war fighter limits; submarine air quality, etc.

# Types of Acute Limits

9

## □ General Population Exposures

### ▣ Routine Conditions

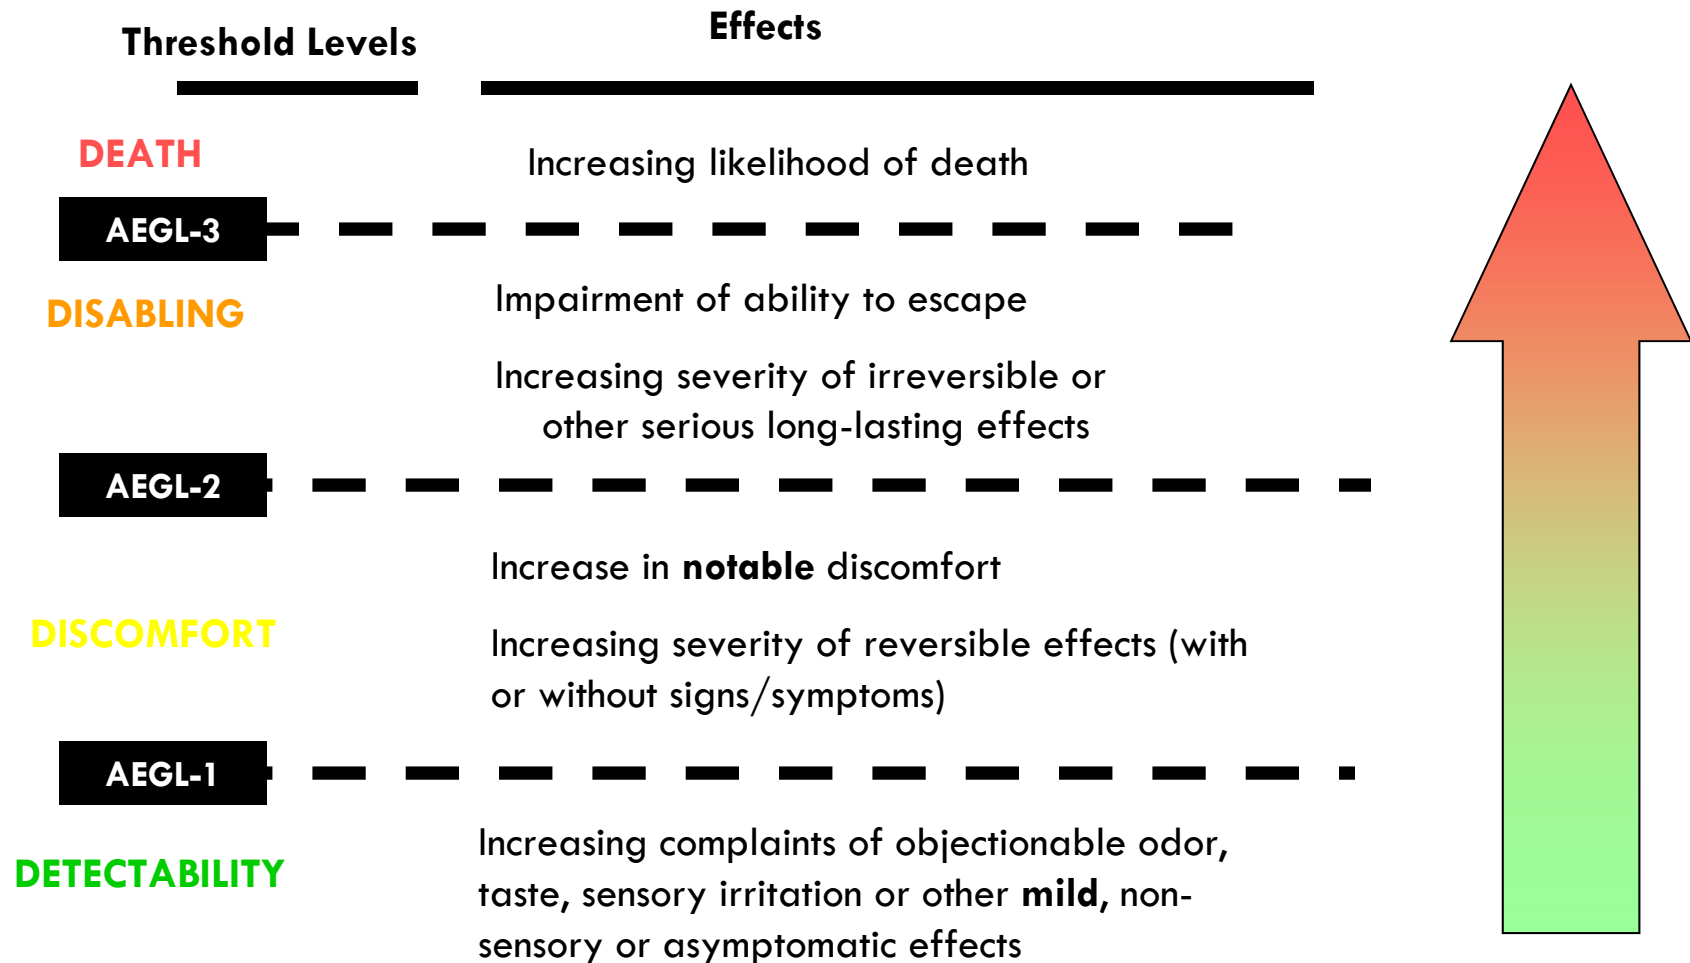

- U.S. EPA Acute Reference Values (ARE)
- U.S. state values (often for facility permitting) such as California acute reference exposure limits (REL); Texas environmental screening levels (ESL)

### ▣ Non-routine operations

- NAS/NRC Acute Emergency Guideline Levels (AEGL)
- AIHA Emergency Response Planning Guidelines (ERPG™)
- DOE Temporary Emergency Exposure Levels (TEEL)

# Dose-Response: AEGLs

## Table of Contents

  - ☐ ☒ FULL RECORD
  - ☐ ☒ Substance Identification/Summary Table
    - ☐ Substance Name
    - ☐ CAS Registry Number
    - ☐ Risk Values - Summary Table
  - ☐ ☒ Data - Noncancer Oral
    - ☐ Noncancer Oral Risk Values Table
    - ☐ Noncancer Oral Synopsis
    - ☐ Noncancer Oral Specifics
  - ☐ ☒ Data - Cancer Oral
    - ☐ Cancer Oral Risk Values Table
    - ☐ Cancer Oral Synopsis
    - ☐ Cancer Oral Specifics
  - ☐ ☒ Data - Noncancer Inhalation
    - ☐ Noncancer Inhalation Risk Values Table
    - ☐ Noncancer Inhalation Synopsis
    - ☐ Noncancer Inhalation Specifics

### Substance Identification/Summary Table:

**Substance Name:** BENZENE

**CAS Registry Number:** 71-43-2

**Risk Values - Summary Table:**

Summary Risk Table for: BENZENE								
Risk Value Type \ Organization	ATSDR <sup>1</sup>	Health Canada <sup>2</sup>	IARC <sup>3</sup>	IPK <sup>4</sup>	ILIR PA <sup>5</sup>	NSE Int <sup>6</sup>	RIVM <sup>7</sup>	U.S.CPA <sup>8</sup>

# Why Do You Need to Know?

- Increased duties outside of routine operations
  - ▣ In well controlled operations – periodic or task operations often greatest exposure concern
  - ▣ Increased role in evaluating off-site community exposures or releases for emergency response
  - ▣ Greater roles in events that affect the general population
- Preferred value may not be available
- Understanding basis of other values – allows for better judgments in:
  - ▣ Interpreting results for an existing value
    - Current value seems reasonable compared to array of existing values?
  - ▣ Filling gaps when an existing value is not available or may be out-dated

# Selecting Among Resources

- How to decide which value among many
  - ▣ Mandated regulatory hierarchy
  - ▣ Other considerations to weigh in decision
    - Relevance of the guide value to the scenario of interest
    - The degree to which the exposure guidance includes current literature and methods (development and *full* review date)
    - Confidence in the value
      - Screening vs. full assessment
      - Robustness of limit setting process (e.g., authoritative agency, peer review, etc.)

# Approaches to Identify Guidance

## □ Emergency Response

- ▣ Contact emergency response resource – e.g., CHEMTREC® or the manufacturer MSDS contact number

## □ Planning

- ▣ Search databases or contact organizations for specific reference value of interest
- ▣ Compile array of relevant limits as a surrogate for the desired scenario limit
- ▣ Seek to develop limits for values of interest
  - Nomination through ERPG™ Committee, etc.
  - Develop value with internal or consulting resources using current risk assessment methods with peer review

# Resource Links Not Exhaustive

## □ Hazard and Toxicology Databases

- EPA IRIS [www.epa.gov/iris](http://www.epa.gov/iris)
- TOXNET – HSDB <http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB>
- ITER <http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?iter>
- European Commission – ESIS <http://ecb.jrc.ec.europa.eu/esis/>
- Concise International Chemical Assessment Documents (CICAD) <http://www.who.int/ipcs/publications/cicad/en/>

## □ Exposure Limit Resources

- ACGIH TLV®
- AEGLs <http://www.epa.gov/opptintr/aeql/>
- AIHA WEEL™ [http://www.aiha.org/foundations/GuidelineDevelopment/weel/Documents/WEEL\\_Values2010.pdf](http://www.aiha.org/foundations/GuidelineDevelopment/weel/Documents/WEEL_Values2010.pdf)
- AIHA ERPG [http://www.aiha.org/foundations/GuidelineDevelopment/ERPG/Documents/ERPG\\_Values2010.pdf](http://www.aiha.org/foundations/GuidelineDevelopment/ERPG/Documents/ERPG_Values2010.pdf)
- DOE TEELs [www.eh.doe.gov/chem\\_safety/teel.html](http://www.eh.doe.gov/chem_safety/teel.html); [www.ornl.gov/emi/scapa/teels.htm](http://www.ornl.gov/emi/scapa/teels.htm)
- NIOSH IDLH <http://www.cdc.gov/niosh/idlh/idlh-1.html>
- NIOSH RELS <http://www.cdc.gov/niosh/npg/default.html>
- OSHA PELs <http://www.osha.gov/SLTC/pel/>

## □ Integrated Emergency Response Information

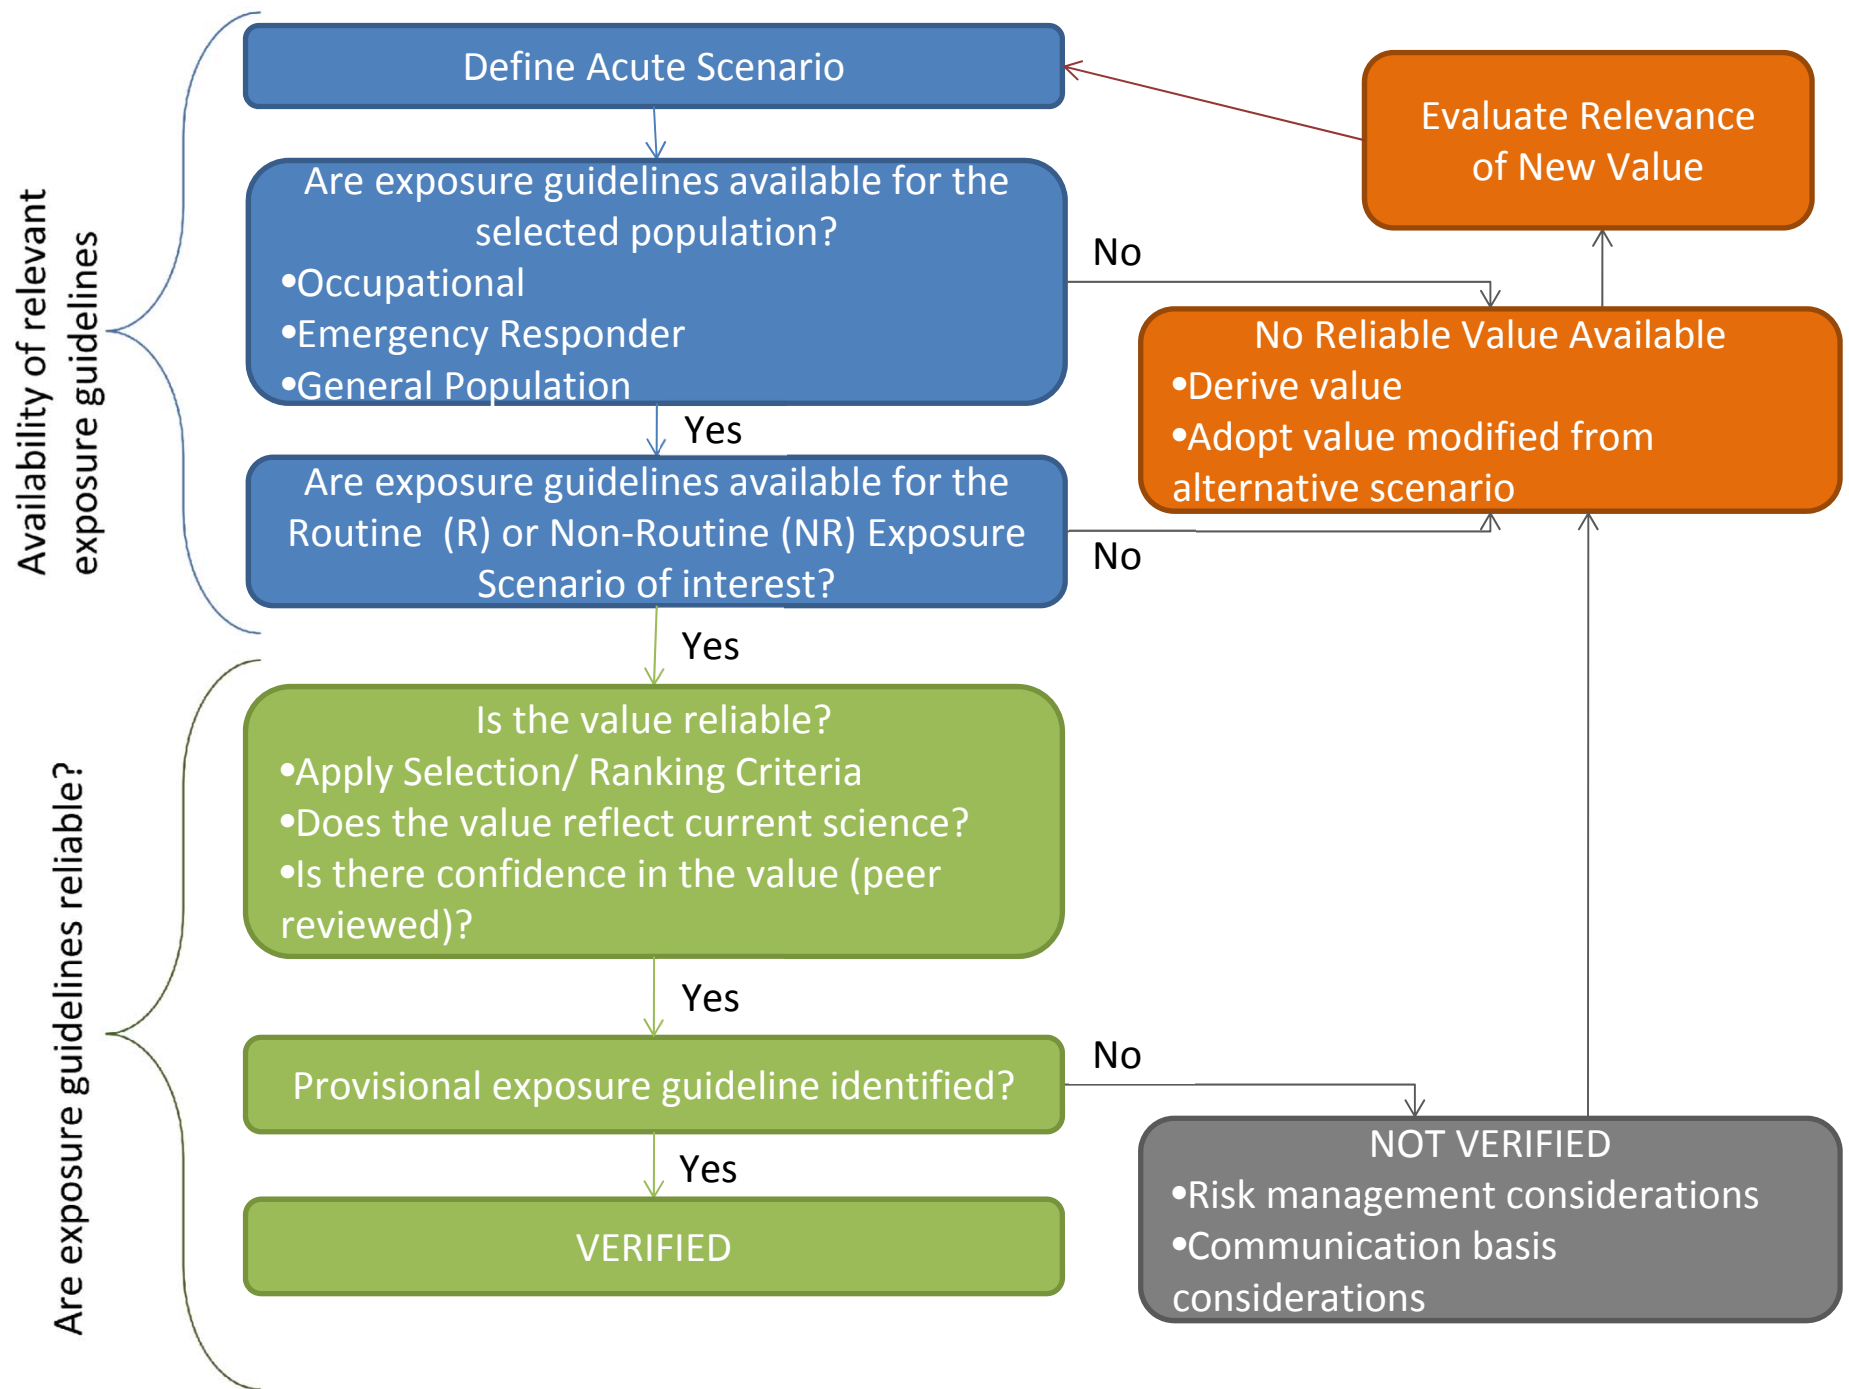

- Radiation Emergency Medical Management (REMM) <http://www.remm.nlm.gov/>
- Wireless Information System for Emergency Responders (WISER) <http://wiser.nlm.nih.gov/>
- Chemical Hazards Emergency Medical Management (CHEMM) [near completion]

# Integrative Resources Are Needed

- Increased need for “tool boxes” and decision support systems, ideally:
  - ▣ One-stop shopping
    - Rich source of toxicology data, and
    - Rich source of methodology information, and
    - User algorithms (or at least exports to user tools)
  - ▣ Tools to identify the most relevant content
    - Need access to everything, but want most relevant first: relevance sorting, quality filters, value of information tools, decision logics
  - ▣ Compatibility with mobile technology
    - Do we have an App for that?

# Take Home Points

- The number of resources available is vast!
- Part of effective planning process is knowing ahead of time where to get health hazard and exposure limit information
- A process is needed to prioritize and select among available resources
- The utility of the resources will vary by the
  - ▣ Phase of the response
  - ▣ The nature of the scenario
- New efforts to develop integrated data resources and decision tools to help – see next talk!
