Note:

1. The body weight (BW) unit is kg, the food intake unit is kg/day, and the water intake unit is L/day. The food factor unit is kg food/kg BW/day and the water factor is L water/kg BW/day.
2. The subchronic and chronic body weights are the time-weighted average (TWA) body weights for laboratory mammals over the period from weaning to 90 days (subchronic) and from weaning to 730 days postweaning (chronic).
3. All the default values listed in the table including body weight, food intake and water intake, are obtained from U.S. EPA (1988) and based on these default values, the food and water factors are calculated.
