Bc
Dose-Response Assessment Boot Camp

The accelerated, intensive hands-on training in HAZARD CHARTERIZATION and DOSE-RESPONSE ASSESSMENT

RISK ASSESSMENT FROM 0 TO 95% CONFIDENCE IN 5 DAYS!

Toxicology Excellence for Risk Assessment (TERA)
1250 Ohio Pike, Suite 197
Cincinnati, Ohio 45102
Course Information

Who should attend?
- Risk assessors and toxicologists who conduct, write, and/or review chemical assessments.
- Risk managers or policymakers who use the results of chemical assessments and want to fully understand the processes involved in risk development.

Prerequisites
- Basic understanding of toxicology.
- Interest in developing skills in human health risk assessment.

What you should bring
- Laptop
- Calculator

What you will learn
This is a 5-day intensive, hands-on training in hazard characterization and dose-response assessment. Both beginners and expert toxicological risk assessors will learn advanced methods, and enhance their understanding and skills in the basics. Course lectures will be supplemented with daily hands-on application exercises.

There will be homework
Make sure to reserve time each evening for the homework exercises.

Class is held Monday through Friday from 9:00am to 5:00pm but usually ends early on Friday.

Upon completion of the course, participants will be able to derive and evaluate risk values and supporting documentation for both non-cancer and cancer risk assessments.
Course Topics

Non-Cancer and Cancer Risk Assessment Methods
- Critically analyze effect data.
- Apply frameworks for evaluating mode of action (MOA) & human relevance.
- Understand & apply toxicokinetic data in evaluating MOA & developing risk values.
- Synthesize data for hazard characterization and critical effect identification.
- Learn latest technologies in risk assessment.

Dosimetric Adjustment Methods in Dose-Response
- Develop interspecies oral dose adjustments, conversions for cancer unit risk/slope factor and inhalation exposures, and calculate human equivalent concentrations (HECs) for particles and vapors.
- Understand uses of PBPK modeling in risk assessment and issues for its application.

Benchmark Dose (BMD) Modeling and Application in Risk Assessment
- Hands-on experience using BMD modeling for all models in EPA software (i.e., dichotomous continuous, cancer, nested.)
- Apply BMD modeling, choose models & parameters, select data & run models, and select appropriate BMD as point of departure in a human health assessment.

Principles for Application of Uncertainty Factors & Chemical Specific Adjustment Factors (CSAFs)
- Use of uncertainty factors by regulatory groups, use of data to support values other than defaults.
the Course Experience

Location
The course is held at the Cincinnatian Hotel, 617 Vine Street, Cincinnati, Ohio 45202 in the heart of the Queen City.

Lunch
Lunch is provided daily. Because this is an intense training, we serve meals that fuel both body and brain.

Specialty meals can be created for those who are vegetarian, vegan, gluten free, or have food allergies or restrictions.

Beverages and substantial snacks are also served during two daily breaks.
The location

The location is energetic and exciting!

It’s steeped in history and has lots of common spaces. You can take a brisk city walk, relax during lunch, or just enjoy some down time.

Credits Available

Continuing Maintenance (CM) points are available from the American Board of Industrial Hygienists (ABIH)

Continuing Education Units (CEU) are available from the National Environmental Health Association (NEHA)
What attendees are saying...

Not only did I learn how to perform risk assessment, hazard assessment, and dose-response analysis, but also I met and networked with many professionals from a variety of industries, including consumer products, biotechnology, environmental engineering, and even a government toxicologist from Chile. Most of the other students in the course were professionals with varying years of experience in risk assessment looking for continued education. I learned from their stories and the questions they had about the material. Further, it was a unique opportunity to learn about a variety of industry and government careers.

Overall, I benefited greatly from this opportunity, and I believe I took a good STEP into risk assessment that will be hugely valuable to my career development.

-Anne T.

My experience at TERA’s Dose-Response Boot Camp was outstanding. While the lectures and class exercises provided the fundamentals, the true capstone experience arose from our case study risk assessment. This consisted of a guided set of diverse and complicated scientific studies that our small group of four people had to wade through and utilize to perform a full risk assessment, based on real-world data, and identify a “safe” dose or lifetime risk factor.

My group had many spirited debates on how to approach the problem; we were assessing the carcinogenicity of a dietary chemical that appeared to cause thyroid and mammary tumors. More so than the science or analytics, this case study provided an opportunity to debate the appropriate risk assessment path among well-trained and clever scientists. This is where the “art” of risk assessment comes into play and ended up being a fun exercise.

-Michael K.

Phone: _______ _______ __________________________
Email: ______________________________________________________

Registration Course Fee: for Fall, 2022 (Lunches are included in price)
☐ $2,650 General   ☐ $2,150 State/Local/Tribal

Late Registration Fee: If received after September 18, 2022
☐ $2,850 General   ☐ $2,350 State/Local/Tribal

Payment Method:
☐ Check (payable TERA, include Attendee Name in memo)
☐ Purchase Order (government agencies only email us for details)
☐ Credit Card:  ☐ Visa   ☐ MasterCard
